16. Shopping trip.

Filename: shopping_trip.js

The script should calculate the total price for a user after a shopping trip. The items that can be bought are bread, milk, cheese, and yogurt.

The prices are as follows:
Bread: € 2.
Milk: € 1.5.
Cheese: € 4.
Yogurt: € 1.2.

Example of interaction with the program:

```
Hi! Welcome to the Ivan on Tech Shop!

How much bread do you want?
>2
How much milk (liter) do you want?
>1
How much cheese do you want?
>1
How many yogurts do you want?
>2
The total amount to pay is 11.9 €.
```

Solution:

```javascript
var bread = 2;
var milk = 1.5;
var cheese = 4;
var yogurt = 1.2;

var sum = 0;

alert("Hi! Welcome to the Ivan on Tech Shop!");

var input = prompt("How much bread do you want?");
sum += input * bread;
```

```javascript
var input = prompt("How much milk (liter) do you want?");
sum += input * milk;
var input = prompt("How much cheese do you want");
sum += input * cheese;
var input = prompt("How many yogurts do you want?");
sum += input * yogurts;

console.log("The total amount to pay is", sum);
```
